## ABSTRACT

The present work presents an analysis of the descriptive memorials of 3 municipalities in the state of Amapá, these memorials directly influence the legal limits of the municipalities, their areas of coverage and materialization of their perimeters. The objective of the work is to portray the existing reality with respect to issues related to municipal boundaries, using geotechnologies to identify incompatibility with regard to the descriptive memorial and the existing cartographic base. As a result, it was possible to identify several inconsistencies during the spatialization of the municipalities from the information contained in the descriptive memorials, thus showing the need to revise the municipal limits.

**Keywords:** Municipal boundaries. Spatialization. Geotechnologies. Cartography.
